Work Experience:

7/2021-Present | **Game Engineer II**
Filament Games - Madison, WI

- Released several games as the lead and generalist engineer of small agile development teams.
- Performed maintenance and performance improvements on educational games for various clients.
- Worked in Unity and Unreal Engine 4 using C#, JavaScript, and Blueprints.
- Utilized Jenkins and GitLab CI for deploying Apple, Android, and WebGL applications.
- Created applications utilizing AR, VR, kiosk support, accessibility features, and analytics.

Relevant Projects:

Some Assembly Required & My Robot (RoboBo) - Gameplay Engineer
Filament Games & Meta Released Titles

- Collaborated with a small development team to release RoboCo spin-offs for Meta Quest 2 & 3.
- Developed several VR- and MR-only features including out-of-bounds visibility and room-space object placement.
- Optimized a 9-year-old code base to commercially perform on a Meta Quest 2.

People's Pie - Lead Engineer
Filament Games & iCivics Released Title

- Deployed a live mobile and web educational game as the only engineer on the team – created gameplay systems, implemented graphics from artists, connected server integrations and analytics, and worked closely with clients to see their projects realized.
- Awarded GEE! Award in summer 2023.
